Improving Customer Payment Efficiency is Easier Than You Think

We have several point-of-sale solutions to choose from.

Accept Various Forms of Payments

Clover™ enables your customers to use credit, debit, and EMB chip cards to make purchases. Contactless and Apple Pay® payments are also accepted. Cash is, of course, another viable option.

Modern Design

Unlike many traditional terminals, Clover solutions are designed with simplicity and durability in mind.

User-Friendly Components

Clover provides training tools, including online tutorials, to make sure you, your employees, and your customers are all comfortable using the machinery.

Unique Features

A scanning camera, touchscreen, coordinated printer and cash drawer are just a few features of Clover. Others include inventory management, employee activity tracking, and transaction reporting.

Added Level of Security

Clover products have built-in card readers with encryption capabilities. When a card is encrypted, its confidential information cannot be accessed without a security key. This extra security measure makes it even more difficult for thieves and hackers to obtain consumer data.

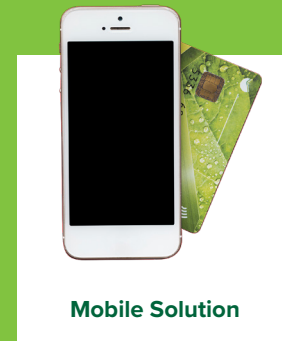

Endless Processing Capabilities

We offer a boundless amount of ways to process payments securely: credit cards, EBT/debit cards, eWallets (ApplePay®, GooglePay®, etc.), personal eChecks (with warranty), payment gateways, electronic payroll processing, and more.

Payment Processing for Any Business

We have solutions for all types of businesses: B2B (wholesale, supply, equipment), healthcare/doctors' offices, auto dealerships/services, nurseries, grocery stores, lodging, restaurants, eCommerce, non-profits, attorneys, CPA's, petroleum, and more.
